This week of February 16, 2015 at a glance...

Monday: 2/16	Tuesday: 2/17	Wednesday: 2/18	Thursday: 2/19	Friday: 2/20
HOLIDAY NO SCHOOL		Solo & Ensemble Performance Hawkins gym @ 6:00		Last day of the Trimester  Galaxy Dance: 6:00 - 8:00  Birthday: Mrs. Hirata

## A Note from the Principal:

Dear Jefferson Families—

This week marks the end of the 2nd Trimester! We are officially 2/3 of the way through this school year!

This is a good time to check in with your child's teacher if you have any concerns about their progress. Schedule a conference or send an email and keep updated on how your child is doing in school.

The MJPPFA is starting to plan for our spring carnival. This is a great chance to get involved at school! Contact the school office for more information.

We have a dance on Friday night for students who purchased and ASB Card! Remember to arrive by 6:15 and be picked up by 8:15.

Thanks,  
Jennifer Tilton

# MJPFA News:

\*SAVE THE DATE! The 2015 Monticello- Jefferson Carnival will be held on Friday, May 8, from 3pm-7:30pm at Monticello. With games, prizes, food and entertainment, it is sure to be a great time for all!

\*Carnival Volunteers Needed! If you are interested in organizing an event or just volunteering at a game booth for an hour, we need your help! Please contact Alexis Imperial Bobis at [alexis.imperial@gmail.com](mailto:alexis.imperial@gmail.com) and let us know how you can help.

The Monticello- Jefferson PFA would like to let you know that the final Box Top collection date for our 2015 MJPFA Box Top fundraiser will be Friday, February 27. Help us reach our goal of \$2,000!

Wednesday February 11, 2015

Dear 8th Grade Parents/Guardians,

It is that time of year for purchasing 8th grade baby ads. This is the opportunity to purchase a space for your graduating student in the yearbook.

Photos will be scanned into layouts. We intend to return the photo, however, we can not guarantee it so please do not send any photo that cannot be replaced. We suggest you make a copy of the photo before submission.

If you want to send a digital photo, jpg formats works the best and you can send it to: [agieseke@sjcoe.net](mailto:agieseke@sjcoe.net)

**DEADLINE: Friday February 27, 2015.**

Sincerely,

The Jefferson Yearbook Staff

Dear Parents,

According to the California Department of Public Health, the number of measles cases continues to rise in California. As you may know, Measles is a highly infectious, airborne disease that typically begins with fever, cough, runny nose, and red eyes and within a few days a red rash appears, usually first on the face and then spreading downward to the rest of the body. The measles virus can live for up to one hour on a surface or in an airspace where the infected person coughed or sneezed. If other people breathe the contaminated air or touch the contaminated surface, then touch their eyes, noses, or mouths, they can become infected. Measles is so contagious that if one person has it, 90% of the people close to that person who are not immune will also become infected. On average, one person with measles can infect 18 people, if they are not immune. Infected people can spread measles to others from four days before to four days after the rash appears. About three out of 10 people who get measles will develop one or more complications including pneumonia, ear infections, or diarrhea. Complications are more common in adults and young children.

If your child has not been vaccinated for the measles and is eligible for vaccination, it is urgent and important that you contact your healthcare provider and have your son or daughter receive the measles vaccination. There are some people that are unable to be vaccinated against the measles. Therefore, having others who can be vaccinated helps protect those individuals that are unable to receive vaccine. These individuals that are unable to be vaccinated may include, but are not limited to, very young infants and children (less than 5 years old), immunocompromised children or adults such as those with leukemia, cancer and HIV infection, and pregnant women.

If you believe your son or daughter may have been exposed to the measles, please keep them home and contact your health care provider for next steps as well as the school to inform them. If a case of measles appears within our school community, students that have not received the measles vaccine will be sent home (excluded) from school. Should you have questions, please contact your health care provider.

Sincerely,

Donna Beckman, SJCOE Health Services Coordinator

Queridos Padres,

De acuerdo al Departamento de Salud Pública de California, el número de casos de sarampión continúa aumentando en California. Como ustedes ya sabrán, el Sarampión es una enfermedad altamente infecciosa, esta enfermedad se transmite en el aire, ya que típicamente empieza con fiebre, tos, secreción nasal, ojos rojos y dentro de pocos días aparece una erupción roja, generalmente empieza en la cara y luego se extiende hacia abajo, en el resto del cuerpo. El virus del sarampión puede vivir durante una hora sobre una superficie o en un espacio en el aire donde la persona infectada estuvo tosiendo o estornudando. Si otras personas respiran el aire contaminado o tocan la superficie contaminada, y después se tocan sus ojos, nariz o boca, ellos pueden llegar a infectarse. El sarampión es mucho muy contagioso ya que si una persona lo tiene, el 90% de la gente cercana a esa persona, y quienes que no han sido vacunados, también serán infectados. En un promedio básico, una persona con sarampión puede infectar a 18 personas, si no han sido vacunadas. Las personas infectadas pueden extender el sarampión a otros desde cuatro días antes, hasta cuatro días después de que aparezca el sarpullido. Aproximadamente tres de cada 10 personas que se infectan del sarampión desarrollará una o más complicaciones, incluyendo neumonía, infecciones del oído o diarrea. Las complicaciones son más comunes en los adultos y niños.

Si su hijo no ha sido vacunado para el sarampión y es elegible para la recibir la vacuna, es urgente y muy importante que usted llame a su médico y pida que su hijo o hija reciban la vacuna contra el sarampión. Hay algunas personas que no pueden ser vacunados contra el sarampión. Por lo tanto, el tener a otros que si pueden ser vacunados ayuda a proteger a aquellas personas que no pueden recibir la vacuna. Estas personas que no pueden ser vacunadas pueden incluir, pero no se limitan a, los bebés muy pequeños y los niños (menores de 5 años de edad), los niños o adultos con un sistema inmunológico muy débil como aquellas con leucemia, cáncer e infectados con el HIV (virus del sida), y las mujeres embarazadas

Si usted considera que su hijo o hija han sido expuestos al sarampión, por favor, manténgalos en casa y en póngase en contacto con su proveedor de servicios médicos para continuar con los siguientes pasos, así como también llame a la escuela para informarles. Si aparece un caso de sarampión dentro de nuestra comunidad escolar, los estudiantes que no han recibido la vacuna contra el sarampión serán enviados a casa (excluidos) de la escuela. Si usted tiene preguntas, póngase en contacto con su proveedor de servicios médicos.

Atentamente,

Donna Beckman, Coordinadora de Servicios de Salud de SJCOE
